European Collaborative Study of Mosaicism on CVS (EUCROMIC)

In January and/or June 1993 those of you having reported CVS mosaics to the European collaborative study between 1986 and 1991 received a mailing. We requested clinical follow-up on children live-born after CVS mosaicism, and offered the possibility to test these individuals for uniparental disomy, via a collaborative European effort. If you have done such testing in your own center, sharing your results will help our collaborative effort. The success of this study depends on your participation!
