In the interest of scientific accuracy and our mutual desire with the editors that only high quality and reliable data are published, we regret to say that the in vivo data for the article above are not considered reliable. A technician with responsibility for conducting in vivo tumor xenograft experiments admitted to manipulating data for some of the experiments he performed. We wish to retract the data until new in vivo experiments have been repeated and reevaluated. The validity of the in vitro and cellular data is not in doubt. We very much regret this situation.
