Strengthening gums

Beverly Hills Formula has launched Beverly Hills Formula Gum Strengthening toothpaste. Using a combination of gum strengthening and anti-bacterial agents, it claims regular brushing with its latest

whitening toothpaste will help nourish and strengthen gums, fight plaque, remineralise and harden tooth enamel for cavity protection and leave your breath smelling fresher.

This formulation contains allantoin, co enzyme Q10, fluoride, folic acid, horse chestnut, hydrated silica, vitamin E and vitamin B5, providing superior anti-inflammatory properties. The natural silica thoroughly cleanses teeth without damaging the tooth enamel. Teeth will also benefit from improved stain removal and whitening ingredients. It is available in Total Protection and Sensitive.

Marketing private dentures

To help you market your private dentures, Myerson, suppliers of convincingly realistic private denture teeth, supply a marketing pack free of charge. The pack includes a shade guide, before and after glossy photographs laminated on card, patient brochures and a mould chart.

To help you to personalise your patients' dentures, the Living Mould Guide has actual samples of each of the upper anterior teeth so you will be able to exactly match not only the shade of

the natural teeth but also show patients the best match in terms of texture and translucency. The guide usually costs £324, but as a special promotion is offered at £115.

Real-time graphs

The Castellini Implantor Brushless micromotor is a new innovation that together with an exclusive computing program is able to display immediate graphs showing the degree of 'effort' - the mechanical force output by the instrument - at every instant during osteotomy procedures.

The data delivered is memorised, gradually forming a curve which represents all of the values from the start of the procedure to the finish - the torque

curve. High curves are indicative of a high resistance to penetration indicating elevated bone density while low curves indicate a low bone density, corresponding to a small degree of tissue resistance.

The computer software used with the brushless micromotor, will run through the surgery PC as a stand alone software package and the Castellini Implantor Brushless micromotor itself can be integrated on to all new Castellini dental units.

Sit in style

Admor has added a number of new chair ranges for 2007. The products include Stack 2, a range of stackable armchairs and chairs with wooden frames and soft upholstered seats and backrests available in a variety of colours, and Low Stack 2 with a lower seat height of 420 mm.

The High Link Seating range is supplied with either chrome plated or black powder coated frames with options for either a fabric covered seat and backrests or a plywood seat and backrests. Chairs can be linked with matching brackets to keep them in line.

Lastly, the Design Classics Range is a new range of all time classic design favourites including the attractive Tub Chairs and Sofa.

Admor also offer a range of reception furniture for office and reception areas that will complement your choice of seating.

ERGONOMICS

High depth of field

New EyeMag Smart loupes from Carl Zeiss provide optimum image quality at 2.5x magnification, with elective working distances from 300–550 mm in increments of 50 mm.

Ideal for dentists, dental hygienists and dental technicians, EyeMag Smart loupes give an excellent, wide field of view with high depth of field.

The design features a lightweight titanium frame that ensures an ergonomical and comfortable working position.

The intuitive operation enables adjustments to individual require-

ments in order to match to the users exact interpupillary distance and viewing angle.

This enables easy placement and removal of loupe attachment and a flip-up function facilitating unobstructed vision that allows easy communication with patients.

Purchase of the EyeMag Smart loupes includes side shields and protective caps, autoclavable contact guards and a carry case.

They are available from Nuview.

Less stress on hands

Hand scalers show the first signs of bluntness after just 10-15 strokes and this can be the start of hand-fatigue related illnesses such as carpal tunnel syndrome. Blunt instruments mean that you have to work harder to achieve the same results, putting more stress on your hands.

The PerioStar 3000 from Kerr sharpens hand scaling instruments quickly and effectively, maintaining their original sharpness and geometry. This means that the life expectancy of the instrument will be dramatically improved, as very little material is removed throughout the sharpening process, thus saving further expenditure on new instruments. A demonstration video of the PerioStar 3000 is available free of charge.

Comfort with performance

NSK have designed the Ti-Max X Series to deliver a combination of comfort and performance. Prolonged, repetitive use of your handpiece can put increased strain on the hand and wrist, causing discomfort and ultimately affecting your performance and compromising your ability to deliver the best clinical results for your patients.

Ergonomically designed, the Ti-Max X Series boasts a lightweight titanium body. The handpiece rests comfortably in the hand and reduces the risk of surgery-related hand or wrist problems.

Good posture

The DynamoSeat and InCharge stools from Evident's DynamoStool range have an ergonomic design.

This helps to reduce your chances of surgery-related back problems by automatically correcting your seating

position and creating perfect balance, regardless of the height at which you are working.

Good posture and the ability to work at a comfortable distance from the patient can help promote active blood circulation and improve respiration.
