## Islet G protein-coupled receptors as potential targets for treatment of type 2 diabetes

Bo Ahrén

*Nature Reviews Drug Discovery* 8, 369–385 (2009) | doi:10.1038/nrd2782

The structure of liraglutide in Table 2 on page 378 is incorrect; the C<sub>16</sub> fatty acid is connected to amino acid number 28 (R) but (as stated in the text) it should be connected to amino acid number 20 (K). The correct structure is shown below:
