

Treat limited jaw opening in patients

Total TMJ is delighted to present the OraStretch Maximum Interincisal Opening (MIO) scales, which make it quick and easy to measure mouth opening for improved management of temporomandibular joint (TMJ) disorders.

The OraStretch MIO includes a variety of rulers to enable measurement of jaw rotation and mouth opening, as well as a trismus guide and a log area for recording patient information. It's quick and easy to use, disposable and cost-effective. Plus, it's ideal when used alongside the OraStretch Press Rehab System – which can help patients improve their jaw mobility and mouth opening by 1-2mm a week with continued use. To see how the OraStretch MIO could improve your management of patients with limited jaw mobility and function, and for more details about Total TMJ and the products available, call 01202 313701.

The time for AI is now

Want to streamline your appointments, achieve more accurate diagnoses and help your business grow? By embracing the new AI Insights solution from Carestream Dental, you can accomplish all of this and more.

Cutting-edge technology ensures that you receive near-instant automated analysis and reporting for radiographs, improving consistency in X-ray evaluation and supporting better clinical decisions.

Furthermore, clear data allows findings to be presented more clearly to patients, helping to improve treatment acceptance, boost practice revenue and ensure an excellent standard of treatment. For more information, contact Carestream Dental on 0800 169 9692 or visit www.carestreamdental.co.uk.

A greener option for your clinical waste

Initial Medical is proud to announce the launch of our new eco-friendly solution – Sustainable Clinical Waste Bags.

We've introduced 30% recycled plastic into our Clinical Waste Bag range, helping us to eliminate 80 tonnes of virgin polythene material from production per year – the approximate weight of 10 African elephants or 33 Initial Medical service vehicles! This way, by switching to these solutions professionals can rest assured that they are reducing their impact on the planet while still ensuring that their clinical waste is properly contained and safe.

Manufactured in the UK, these solutions are also sustainably produced and transported. Conscious effort has been made to reduce any environmental impact by reusing freshwater responsibly and harnessing renewable energy throughout production and ensuring CO2 emissions are minimised during transport.

Make a greener choice today – find out more about our clinical waste bags here: www.initial.co.uk/clinical-waste/waste-bags/. To find out more, get in touch at 0870 850 4045 or visit the website www.initial.co.uk/medical.

Refer your patient with confidence

If a patient case falls outside of your scope of practice, referring them to a specialist will ensure their clinical safety and increase the potential for a successful treatment outcome.

The Centre for Oral-Maxillofacial and Dental Implant Reconstruction is run by the outstanding Dr Cemal Ucer, Specialist Oral Surgeon, and provides an extensive range of treatment options. Delivered by highly-trained professionals, these options include maxillary sinus grafting and reconstruction, nerve lateralisation and repositioning and treatment for medically-compromised and elderly patients.

The Centre is equipped with state-of-the-art facilities, including seven surgeries and a digital dental laboratory for 3D printing and milling. There are also opportunities for postgraduate clinical training and mentorship for dental implant dentists.

When you refer your patients, you're putting their safety first and increasing the potential for a successful and long-lasting treatment.

Contact Professor Ucer at ucer@icedental.institute or Mel Hay at mel@mdic.co or call 01612 371842.
