Improve your diagnostic accuracy

An accurate diagnosis is key for successful endodontic treatment. Along with reviewing the patient's complaint, symptoms, and radiographs, sensitivity tests are an incredibly useful tool in acquiring a diagnosis.

By applying a cold stimulus to the tooth, you are able to assess its vitality. ROEKO Endo-Frost from COLTENE is an effective pulp vitality testing spray which, when applied to a cotton pellet, will stimulate the nerve endings in the pulp, inducing a response in vital teeth. Endo-Frost has a temperature of -50°C – much colder than ice or ethyl chloride.

Choose this easy-to-use diagnostic tool and improve the accuracy of your endodontic diagnosis.

For more on COLTENE, visit www.coltene.com, or call 0800 254 5115.

New senior appointment

Leading accountancy and business advisory firm Haines Watts has continued to grow and expand their client offering, welcoming a new Associate Partner, Sophie Kwiatkowski to the team. Sophie joins the team with nine years' experience, where she has developed a particular specialism and passion in supporting dentistry professionals at all stages in their careers.

Speaking on her experience supporting professionals in the dentistry industry and her new role at Haines Watts, Sophie said: 'For me the move to Haines Watts was all about the people and the way they advocate and put people first.'

'Having come from a firm specialising in dentistry, that is a huge part of me, so it will be nice to integrate that into Haines Watts and bring a part of me to the firm too.'

Sophie joins the team just after the firm moved into their new custom-designed office in the heart of Leeds city Centre, in close proximity to many dentistry practices and professionals. Speaking on the growth of the team and Sophie's appointment,

Managing Partner, James Sutton, said: 'I am excited to welcome Sophie to the team and to support her in growing our offering in the medical accounting sector. She brings a huge amount of knowledge and experience in this area, and is very highly regarded in the dentistry world in particular.'

'Sophie has a growth mindset and she is going to be an absolutely invaluable member of our management team as we continue to develop and grow.'

Haines Watts is a leading advisor to owner-managed businesses in the UK. More information on Haines Watts can be found at <https://www.hwca.com>.

Making a great first impression

To achieve an accurate and complete impression for high-quality restorations, look no further than the KemKat Impression Compound from Kemdent.

KemKat is designed for convenience; simply break off the amount of material that you need, whether it is for a partial or complete denture or adding to a previous impression, and place the leftovers aside for a future impression. You can minimise waste – and costs

– by utilising your material more efficiently.

Whether you're creating a copper band impression or adding to an impression tray, KemKat can work for you. A high viscosity makes KemKat ideal for recording the full depth of the sulcus, increasing the information available to you and your dental technicians.

To find out more about the benefits the KemKat Impression Compound can provide, visit www.kemdent.co.uk or call 01793 770 256.
