A fresh improvement to everyday life

Bad breath can often be an embarrassing topic for patients. It can severely damage confidence in social interactions, with links being made between halitosis and social anxiety disorder.¹

The Breath Co oral rinses make a difference that goes beyond oral health with a solution designed to effectively stop bad breath. Clinically shown to fight bad breath for 12 hours, the oral rinses attack the source of malodour, whilst providing a pleasant mint taste without burning.

The oral rinses are vegetarian, vegan, kosher, gluten-free and suitable for diabetics, so a wide range of your patient base can take advantage of their strengths without concern. Both the mild mint and icy mint variants are made without artificial flavours and colours, and are alcohol-free.

To learn more about how your patients can benefit from the instant relief of fresh breath and about The Breath Co, visit www.thebreathco.com.

The benefits of chlorhexidine without the unwanted side effects

Professionals trust chlorhexidine, because it works. But unwanted side effects like taste disturbance can be unpleasant for patients.

Recommend to them Perio Plus+ solutions, which harness all of the benefits

of chlorhexidine, without disturbing taste. Solutions contain CITROX, a naturally-derived ingredient from bitter oranges.

When combined with polylysine amino acids, the efficacy of Perio Plus+ products is enhanced and their working time prolonged.

Patients will also appreciate the alcohol-free formula, in addition to the inclusion of PVP-VA, which coats the teeth, gums and mucous membranes with a protective film. Solutions cater to a range of patient needs, with options suitable for long- and short-term use.

The ultimate solution for restorative treatment

Are you looking for a versatile alternative to composite and amalgam restorative materials? Diamond Rapid Set Capsules from Kemdent are the ultimate solution.

Diamond Rapid Set Capsules are the user-friendly and cost-effective option for posterior restorations – offering a tough and durable result which is resistant to edge chipping. As well as negating some of the downsides to composite and amalgam materials, Diamond Rapid Set Capsules are a glass ionomer cement which adheres to the tooth structures without the need for tooth preparation

– a reliable and time-efficient solution. Additionally, Diamond Rapid Set Capsules can be chemically cured without dimensional change, meaning that they can be placed in one increment, avoiding the creation of stresses, and reducing the risk of cracking.

For more information about the leading solutions available from Kemdent visit www.kemdent.co.uk or call 01793 770 256.
