

Technology can be a helpful aid in note taking

Kiroku, the digital note taking platform, is a fantastic tool for those who find it difficult to take notes quickly.

It uses smart technology to help clinicians and their dental teams take clinical notes with ease. By using smart templates to assist with note taking for a

wide range of clinical scenarios, Kiroku suggests helpful prompts to make sure that no information is missed.

And, taking notes with Kiroku requires minimal typing, so the majority of clinical notes can be completed by clicking the relevant buttons. This helps to reduce the worry of missing anything important, and of misspelling vital information. Plus, Kiroku allows you to review your notes from anywhere, to ensure that all of the information included is accurate and complete.

For more information about how Kiroku can help you, or to start your free trial, visit trykiroku.com.

Prevention is key

Tooth decay is particularly common in children, with many factors such as diet, oral hygiene, and access to dental care key in its development. By offering oral hygiene advice at a young age, patients are able to gain the confidence to maintain their oral health at home.

For young children, recommend the CLASSIC 04 KIDS toothbrush range. These brushes have long handles to make it easier for parents to help children brush their teeth. When children are ready to brush on their own, recommend the CLASSIC 09 JUNIOR range which features slightly broader handles to make brushing easier. Both ranges have soft bristles to

deliver a good clean while being gentle on the gums.

Enhance diagnostic capabilities

The CS 9600 CBCT system from Carestream Dental is the intelligent 5-in-1 scanner which offers versatility and precision. Its AI-powered positioning enables you to achieve an accurate scan first time, and will make any follow up appointments straightforward, for consistent results over time.

In addition to this, its optional Scan Ceph module scans images in as little as three seconds, allowing you to perform and trace high-quality cephalometric exams in no time.

By introducing a system which enables versatility and simple imaging solutions, your diagnosis and treatment planning workflows will improve.

Prioritise accuracy

The 3M Impregum Super Quick polyether impression material from 3M Oral Care is able to produce outstanding impression accuracy and detail reproduction with just a 2-minute setting time.

The material is ideal for patients with, for instance, single unit crowns, implants, inlays, onlays and smaller bridges. Impregum Super Quick from 3M demonstrates excellent performance in moist situations, and great flow behaviour. Plus, you can avoid the

inaccuracies associated with premature setting, as the polyether material delivers a full 45 seconds of working time.

Additionally, Impregum Super Quick from 3M features a fresh, minty taste which, along with a short setting time, makes impression taking more comfortable for your patients.
