

Free clear aligner webinars throughout 2022

Trycare will be hosting free 3Daligner webinars with one hour CPD development outcome C throughout 2022; visit the Trycare.co.uk website for further details.

Delegates will learn how 3Daligners can be integrated into their practices; advantages over other aligner systems; how 3Dalign aim to eliminate the process of 'refinements' which is a problem with most other systems; see examples of advanced case planning; and find out about 3Dretain and its advantages for long-term retention.

With some treatment plans taking as little as ten weeks and the majority just 10 to 20 aligners, 3Daligners are much quicker, easier, greener and more patient compliant. They enable clinicians to offer patients a simple and cost-effective way to straighten teeth and correct other orthodontic problems.

3Daligner treatment plans include a personalised patient video demonstrating the stages involved and the final outcome.

Because the clinician liaises direct with the technicians manufacturing the aligners, there is no cumbersome computer interface to negotiate and immediate responses are available. With other systems, it can take weeks to receive replacement aligners, during which the patient's treatment can relapse.

With no specialist orthodontic training required, it could not be simpler to get started!

For more information about the 3Daligner range, including course details, contact your local Trycare Representative, call 01274 885544 or visit www.trycare.co.uk.

The gateway to a new digital universe

Dentsply Sirona has unveiled DS Core and other services and solutions, a new and open platform that integrates the whole workflow of digital dentistry – across its devices, services and technologies. DS Core is developed in collaboration with Google Cloud and gives dentists the power to do more, so that they can focus on their patients and create easier ways to collaboratively work with labs, partners and specialists.

DS Core, an open, cloud-based platform operated by Dentsply Sirona, is transforming digital dentistry. It is designed around the needs of dentists and modern dental practices and with a focus on security.

The digital platform is efficient, cost-effective and easy to use – with automatic software updates that give dentists access to the latest version and features. DS Core makes running a dental practice easier, because it seamlessly connects to Dentsply Sirona equipment and is accessible across multiple devices. For dentists, it means they can maximise the productivity of their practice by simplifying workflows and easily adding and integrating new ones. Practitioners can use DS Core to store different types of patient files and make them accessible from multiple locations, while collaborating with partners and colleagues outside their practice. DS Core supports GDPR- and HIPAA-compliant file sharing and cloud storage for patient case files. DS is also introducing two services that help dentists to get the most out of digital dentistry: DS Core Create and DS Core Care.

DS Core Create is an excellent tool for next-level dental design services. With just a few clicks, dental practitioners can gain access to high-quality expert designs that are tailored

for each patient's needs across a broad range of indications without having to use the software themselves. The cloud-based platform makes it easy to delegate the design workflow, which saves valuable time in the dental practice. The service integrates smoothly with Dentsply Sirona's new Primeprint Solution and will grow in the future.

DS Core Care is a comprehensive, integrated and easy-to-understand equipment service and support solution that harmonises equipment with service offerings to provide a seamless customer experience. This helps to increase equipment uptime and give dentists peace of mind so that they can focus on their patients.

Primeprint Solution is a highly automated, end-to-end, medical-grade 3D printing system for dentists and dental technicians who want to expand their treatment and service offerings. It is a smart hardware and software solution that is optimised for dental applications and can run the entire printing process including post-processing. The high level of automation helps reduce handling times, allows delegation and enables maximised productivity. Primeprint Solution enables practitioners to print biocompatible applications with reproducible and accurate results. The printing process has been developed in line with FDA guidelines for Additive Manufacturing (AM) medical devices and outputs from the device are medical products.

Due to various certification and registration periods, not all products are immediately available in all countries. In order to ensure an excellent customer experience, DS Core will be launched in a phased rollout.
