

THE FIRST TOOTHPASTE THAT DIRECTLY FIGHTS SUGAR ACIDS

Colgate has launched a toothpaste with innovative Sugar Acid Neutraliser technology that directly fights sugar acids in plaque, clinically proven to provide enhanced cavity protection (when combined with fluoride) *versus* a regular everyday fluoride toothpaste.

Colgate's new and unique Sugar Acid Neutraliser technology is powered by arginine, a naturally occurring amino acid. This unique Sugar Acid Neutraliser technology is metabolised by plaque bacteria, helping to neutralise the damaging acids produced by the breakdown of dietary free sugars, and in turn restoring pH in the plaque biofilm to a more neutral and healthy level. This technology is intended to complement the role of fluoride in daily toothpaste, to

provide a significant and proven advancement in everyday protection against cavities.

Colgate's revolutionary new Sugar Acid Neutraliser technology is supported by eight years of research involving over 14,000 subjects and has been clinically

proven to provide enhanced cavity protection versus a regular everyday fluoride toothpaste.

PAYMENT PLAN PROVIDER LAUNCHES SMART, SIMPLE WEBSITE

Denplan has launched a new and improved website, designed to make life smarter, simpler and better for its members.

denplan.co.uk is more straightforward and easy to use for dental professionals and patients, and is responsive, so it will work across mobile and tablet devices.

A range of features on the site are designed to help dentists run their business more effectively. The personalised dentist dashboard has unique support tools including monthly reports; patient registration; and dental regulations and business advice.

With one click patients are guided through Denplan's range of industry-leading payment plans and the benefits of taking a more preventative approach to their oral

health. There is also a new video suite with interactive guides explaining how joining Denplan works; how the monthly fees work and how they are set; and how to make a claim.

Denplan has also developed an interactive news hub, working in real time to keep members updated with all the latest news from Denplan and the dental industry.

Visit www.denplan.co.uk to experience the new website for yourself.

NEWLY DEVELOPED RESTORATIVE MATERIAL

IonoStar Molar is a newly developed glass ionomer restorative material which comes in the new VOCO application capsules. The material is applied without conditioner or adhesive and scores particularly highly thanks to its non-sticky consistency and perfect marginal adaptation. IonoStar

Molar can be modelled immediately after insertion and cures within four minutes. Its enduringly high level of fluoride release counteracts postoperative sensitivity. In conjunction with Easy Glaze, the nano-filled protective coating for surface sealing, IonoStar Molar can be used to quickly and easily create restorations which are as aesthetic as they are durable.

IonoStar Molar is suitable for restorations of non-occlusion-bearing Class I cavities, semi-permanent restorations of Class I and II cavities, restorations of cervical lesions, Class V cavities, treatment of root caries, restorations of class III cavities, restoration of deciduous teeth, for use as a base or liner and for core build-up as well as temporary restorations. This makes IonoStar Molar a versatile choice providing the required results for many indications, not least thanks to the handling advantages offered by VOCO's new application capsule.
